## WHITEPAPER

# Artificial Intelligence in the world of the Metaverse

The idea of socializing in the Metaverse arose during a pandemic. People locked in their homes began to look for fun on the Internet. Since the beginning of the pandemic the number of creators of premium amateur sex content (for example - OnlyFans) increased by 40 % and the number of users of these services increased from 7.5 million to 85 million. In the coming years, we can expect a part of the real world will move to Metaverse. One of the areas that will certainly develop dynamically in this direction are social meetings in the context of satisfying your instinctive needs for pleasure. These are just a few of the fascinating elements and applications of artificial intelligence (AI) technology and reasons why it will become an integral part of almost every aspect of the digital world. We want to create a platform that will allow intimate social gatherings. Matching your partner is the first and very important aspect contributing to the correct functioning of the platform. Questions entered by users in the search engine are becoming more and more convoluted. It is not just about keywords anymore, but tagging by the user means the user's intentions and then deliver the most relevant content. This assumption was used to create the „RankBrain” self-learning algorithm, which is the inspiration for i-PornCoin. Additionally, introducing machine learning elements to the algorithms makes the number of ranking factors constantly increase and is determined not by human, but by more extensive scripts. It will be possible to analyze the behavior and personality profiles even more precisely. This allows you to implement your "own" strategy of action, creating a model that will suit our sexual preferences and potential matchmaking with followed users. With the help of meta-analysis, the artificial intelligence applied to i-PornCoin can capture and analyze data sets in a much more complex way than it becomes today, which allows for automation in a much more innovative way than we can currently imagine.

*„The fourth industrial revolution is taking place before our eyes. Learning machines will drastically change our lives. More than a wheel, electricity or the Internet.”*

Jen Hsun Huang – NVIDIA CEO

The predictive analysis used by i-PornCoin is simply the use of data, advanced statistical algorithms and machine learning techniques to determine the probability of future decisions, based on databases. Predictive models can be used in many areas, such as dating sites or VR social events inside the Metaverse with application „Deep Fake” technology. I-PornCoin models allow us to determine the probability that a specific partner will actually be matched to our preferences. The key here is to

remember that the predictive models will be as good as the data you provide. The low margin of error used in the i-PornCoin algorithm based on over 200 different factors and popularization around the world allows user for the creation of perfect pairs, which we are not able to find in real life with that ease. This form of artificial intelligence will transform lonely people into socially and sexually active users prepared to meet in the real world and make the right decisions naturally and unforced, saving everyone's most valuable resource - time. You may not know it yet, but AI is rapidly becoming more and more important in the digital world, the area of social media, dating sites and erotic sites. It becomes an inseparable element of it. According to statistical research on a large group, 47 % of people admit to watching erotic movies, and 84 % of internet users used dating websites. The wide reach of artificial intelligence in digital marketing in 2021 proves the importance of this technology nowadays as well.

## How will artificial intelligence change the porn industry?

Artificial intelligence is a general term that encompasses different approaches and technologies set up to process information like humans. Now it is expanded into many technologies that you probably know, such as voice recognition and chatbots.

*"It's extremely important that AI tools are easy to use and that everyone can take advantage of them."*

Christine Robson - Google

Machine learning used in i-PornCoin is a type of artificial intelligence technology. It is a process in which machines are able to learn how to match partners / partners on their own, using the obtained data sets, and thus increasing the effectiveness of choices by learning on their own. i-PornCoin can be used for many applications - for dating sites, generating potential sexual partners in VR technology and search optimization. Our proprietary AI integrated with i-PornCoin relies on an approach based on extensive data and decision making in this area. AI is used to integrate data from different platforms. Platforms today collect and store all kinds of data as part of the analysis of ideal customer patterns, to develop automated systems and individual customer profiles targeting specific markets. It seems that in the near future, computers will be increasingly responsible for the decisions that are made in our lives. It will be possible to analyze the behavior and profiles of partners even more closely, so that the AI will be able to implement its "own" operating strategy, creating a copy that corresponds to the voice of our preferred partners. These models predict

porn porn

the probability that a specific candidate will actually become a partner. AI can also predict other aspects, such as the likelihood of meeting in the real world or the possibility of creating a family with a given user. AI can infer this by better understanding customer preferences. In addition, it is able to understand the more detailed and complex (multi-matrix) relationships between different data sets.

## Migration to the Metaverse

User will be transferred to the Metaverse using a high-resolution 3D scanner. They are able to process our facial expressions, sending it to VR glasses in real time. Integrated with other layers of data analysis, they can also predict other aspects, such as sense of humor and personal preferences for contact with partners. Using neural networks, the new technology of the intelligent „SmartColiber“ system radically improves the operation of the previously used technology and allows for a semi-autonomous relation.

„SmartColiber“ is the first erotic system designed for everyone. It is integrated with devices using "Touch Me" technology, similar to developed by Israeli scientists at Tel Aviv University. The solution from Israel allows you to restore the sense of touch after amputations and injuries. The innovative sensor, by conducting current from a healthy nerve, recreates feeling in a lost limb or at the site of injury. "Touch Me" uses the most modern technology, similar to the Triboelectric Nanogenerator (TENG). Our company aims to transfer these innovations to the erotic lives of our clients. „SmartColiber“ can take the user to a completely different level of online sensory experience. „SmartColiber“ and "Touch Me" are the most innovative solutions in the industry of the most modern erotic gadgets. The first application of the „SmartColiber“ system will take place during implementation into the Metaverse world on our platform and connecting it to social meetings to fill human needs. The platform will be a meeting place for all interested users to log in - regardless of the real world limitations. The platform ecosystem will be built on four fundamentals: Artificial Intelligence, SmartColiber, i-PornCoin and VR. Users will be able to take advantage of automatic partner selection and start the adventure from meeting to a "happy ending". The user will also be able to use the available models of famous stars or celebrities, which will make previously unattainable dreams a reality. Couples will be able to use the preloaded maps and make love in a selected place on earth or scenery, e.g. a love adventure in Time Square among the crowd. All the characteristics of the environment based on artificial intelligence will be very realistic, and the behavior of the entities will not differ from the norms. The models that refer to erotic cinema stars are of particular interest. In addition,

porn porn

the platform is also a meeting place for friends, swingers, lovers or newly met users - the only limitation is your imagination.

## Anonymous payments and token usability

The sex industry, both in the real world and online, is struggling with the issue of anonymity. Regular payments made by users leave a mark on your bank statement, leading to negative consequences and the necessity to deal with cash. We want to create the web application for anonymous online payments dedicated to specific services, using our i-PornCoin token. The token will be used to open premium content on partner's websites. We are able to provide all the necessary technical solutions to our business partners to ensure the smooth functioning of the website in the area of payment processing. Users will provide us with the liquidity of the token apart from payments - in the tip, subsidy and loyalty program zones. The i-PornCoin token will be the key to our integrated platform called „XActive“. To ensure the best possible liquidity of the token, we will be introducing many solutions using the token on the platform. Streaming channels, based on subsidizing with tokens of content authors or the NFT exchange. We will open the possibility of buying and selling unique private content using the i-PornCoin token. Websites that host streamers run subsidies in the form of "coins". The author of the content determines the target of the coins and the task, then realizes them when collecting the pool. Converting these coins into a token would give you much greater benefits. The content author would realize profits on the stock exchange. Content creator could keep a certain amount of earned tokens for long-term investment purposes, diversifying profits. There would be more HODL cases, and consequently fewer and fewer coins in circulation. This, in turn, will cause drastic increase in the price of the i-PornCoin token. For streamers who are not monetizing their content, viewers will also be able to donate directly to their favorite content creators' wallets via a token, whenever they decide. All of this can happen while remaining completely anonymous. We plan to introduce a staking-based loyalty system; however, we will provide more details later.

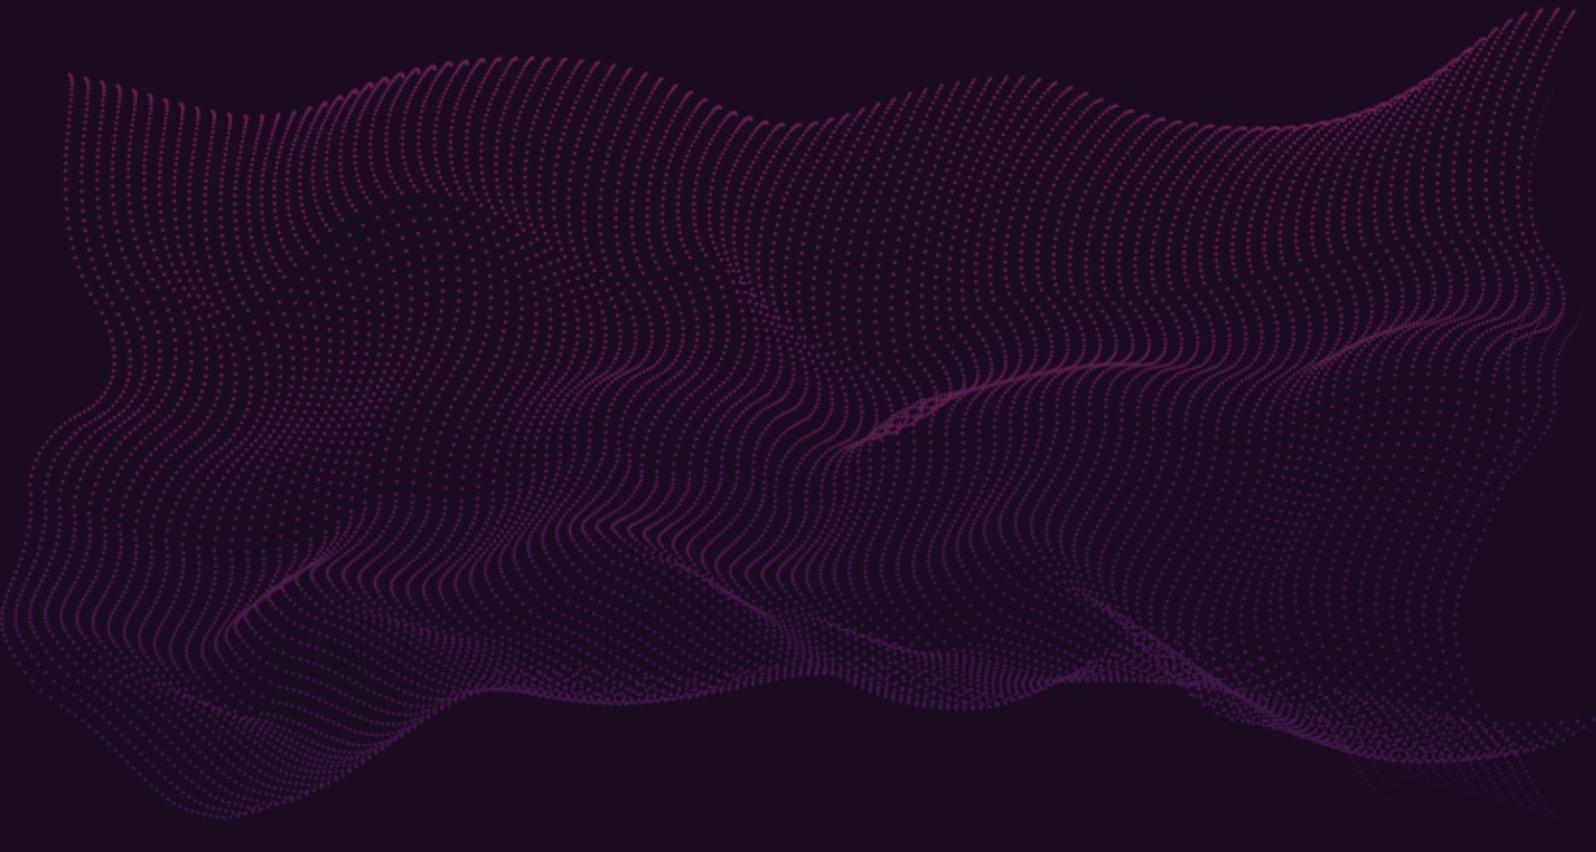

## Distribution of Tokens

Total supply is 1,000,000,000 PORN tokens. The first stage of distribution will be pre-sale of 500,000,000 tokens with two substages. The total amount of tokens is a hard cap. First round of pre-sale will last 30 days or when total pool of tokens will be exhausted. During this time, the price of the token will be 0,000002 ETH. In the case of sale of less than soft cap pool, the price will increase to 0,0000025 ETH after 30

porn porn

days. This second substage of pre-sale will last up to reaching the soft cap limit. The collected funds will be allocated to the development of the project – supplying our team with more experienced and creative developers, the innovation and marketing department. Another 400,000,000 tokens are prepared for business partners and to the opening of new trading strategies. The remaining 100,000,000 tokens will be distributed among the team. Team tokens will not be sold in the first months of the project's operation, as we care about the increased demand for the token. The possible sale of tokens belonging to the team will be carried out in a prudent, gradual manner, without affecting the stability of the cryptocurrency.
